                                                                                                                                                                       Sequence 5, Application US/10332914
Publication No. US20040025200A1
GENERAL INFORMATION:
APPLICANT: Unicrop Ltd
TITLE OF INVENTION: Molecular Control of Transgene Segregation and Its
TITLE OF INVENTION: Becape by a Recoverable Block of Function (RBF) System
TITLE OF INVENTION UNMERR: US/10/332,914
CURRENT APPLICATION NUMBER: US/10/332,914
CURRENT FILING DATE: 2003-01-14
PRIOR FILING DATE: 2000-07-14

Patent No. US20020114797A1

GENERAL INPORMATION:

TITLE OF INVENTION: COMPOSITION AND METHODS FOR MODULATING THE LENGTH OF

TITLE OF INVENTION: TELCMERES

TITLE OF INVENTION: TELCMERES

TITLE OF INVENTION: TELCMERES

FILE REFERENCE: 13024.2

CURRENT APPLICATION NUMBER: US/09/947,659

CURRENT FILING DATE: 1999-02-25

PRIOR FILING DATE: 1999-02-25

PRIOR FILING DATE: 1997-06-30

PRIOR FILING DATE: 1996-07-01

SOFTWARE: Patentin Ver. 2.1

SEQUENCE: PATENCE PATENTIN VER. 20.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7, Application US/09947659

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 63.3 Application US/09835370

Sequence 63.3 Application US/09835370

Patent No. 6777544

GENERAL INFORMATION:
APPLICANT: UHLMANN, EUGEN
APPLICANT: WILL, DAVID W
TITLE OF INVENTION: POLYAMIDE NUCLEIC ACID DERIVATIVES AND AGENTS AND
TITLE OF INVENTION: POCCESSES FOR PREPARING
TITLE OF INVENTION: PROCCESSES FOR PREPARING
CURRENT APPLICATION NUMBER: US/09/835,370

CURRENT FILING DATE: 2001-04-17

NUMBER OF SEQ ID NOS: 64

SOFTWARE: PATENTIN Ver. 2.1

SEQ ID NO 63

TENEMED 10 NO 63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Sequence 18, Application US/08630019A

Sequence No. 6015710

GENERAL INFORMATION:

APPLICANT: Shay, Jerry W.

APPLICANT: Piatyszek, Mieczyslaw A.

APPLICANT: Piatyszek, Mieczyslaw A.

APPLICANT: Corey, David

APPLICANT: No. 6015710ton, James C.

TITLE OF INVENTION: Modulation of Mammalian Telomerase by TITLE OF INVENTION: Peptide Nucleic Acids

NUMBER OF SEQUENCES: 46

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Center, Eighth Floor

CUITY: San Francisco

STATE: California
